GRANT NUMBER DAMD17-96-1-6227

TITLE: Dietary Intake, Alcohol Consumption, and Menopausal Status: A Comparison of Hispanic and Non-Hispanic White Women

PRINCIPAL INVESTIGATOR: Kathy Baumgartner

CONTRACTING ORGANIZATION: The University of Texas Health

Science Center at Houston

Houston, Texas 77225

REPORT DATE: September 1997

TYPE OF REPORT: Annual

PREPARED FOR: Commander

U.S. Army Medical Research and Materiel Command Fort Detrick, Frederick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for public release;

distribution unlimited

## INTRODUCTION

The first year of work towards the completion of a doctoral degree, focused on breast cancer epidemiology, at the University of Texas School of Public Health, Houston, Texas has been completed as outlined in the original statement of work. The details of the subject, purpose, and scope of the research as well as background of previous work was described in detail in the original proposal. Briefly, the focus of this predoctoral fellowship and doctoral dissertation will be on diet and alcohol and their associations with other risk factors for breast cancer, including estrogen receptor status. The basic hypothesis is that these factors may be important in the increasing rates of breast cancer.

The issues related to dietary factors, history of alcohol consumption and relationship to estrogen receptor status are timely as is their relationship to the increased incidence and mortality of breast cancer. These factors are of significance for women with breast cancer and especially so for Hispanic women, given the paucity of information on dietary and alcohol practices for this population (1). Additionally, New Mexico has the largest percentage of Hispanics of all states in the United States (2). In addition, the Hispanic population of New Mexico is also characterized by a unique stability; the majority (75%) report lifelong residence in the state. This fellowship application provides an opportunity to further research on the primary cancer for Hispanic women (3), who will represent half of the second largest minority group in the US population by the year 2030 (4).

The New Mexico Women's Health Study (NMWHS), a statewide, population-based case-control study, included approximately 711 cases and 844 frequency matched controls. Incident cases between January 1, 1992 and December 31, 1994 were ascertained through the New Mexico Tumor Registry (NMTR), one of the population-based cancer registries participating in the National Cancer Institute's Surveillance, Epidemiology, and End Results (SEER) Program since 1973. Rates and trends of cancer incidence, mortality and survival are calculated by ethnicity, gender, and age groups for comparison with national and international data.

Controls were selected and matched on ethnicity, age-group, and geographic region.

The data collected include demographics, reproductive and medical history, medication

usage, use of cigarettes and alcohol, ethnic identification and acculturation, occupational and environmental factors, and diet. Hormone receptor status data, collected by the NMTR for breast cancer cases will be linked to the data collected for cases by the NMWHS.

The specific hypotheses, technical objectives or specific aims and methods which includes a description of the NMWHS study, data collection, statistical methods, and preliminary data were discussed in detail in the original proposal.

## **BODY OF ANNUAL REPORT**

## I. Statement of Work: Year 01 - Completed Tasks

The first performance period (September 1, 1996 - September 30, 1997) of the predoctoral fellowship "Dietary Intake, Alcohol Consumption, and Menopausal Status: A comparison of Hispanic and Non-Histpanic White Women" has been completed. The principal investigator formed an advisory committee in Fall, 1996, composed of: Dr. John F. Annegers, Professor of Epidemiology; Dr. Ralph Frankowski, Professor of Biometry; and Dr. R. Sue McPherson, Assistant Professor of Epidemiology (Appendix A1 - approval of Ph.D. Advisory Committee form). A total of 36 credit hours were completed under the supervison of the advisory committee (Appendix A2 - list of courses), the minimum required prior to the Ph.D. Qualifying Examination.

The principal investigator attended the 30<sup>th</sup> Annual Meeting for the Society for Epidemiologic Research, held from June 12 - 14, 1997 in Edmonton, Alberta, Canada.

The qualifying examination was completed satisfactorily in August, 1997, permitting admission to candidacy for a doctoral degree.

## II. Year 02: Summary of Plans

During the second performance period (October 1, 1997 - September 30, 1998) any pertinent additional individual coursework will be taken. Library research will be conducted towards the Ph.D. proposal and dissertation, and data analysis will be initiated.

A request to appoint a Ph.D. doctoral thesis committee will be submitted in the Fall, 1997, and will include at least the three advisory members mentioned above, and Dr. Jonathan

M. Samet, Professor and Chairman of Epidemiology at Johns Hopkins University, School of Hygiene and Public Health, who was the original Principal Investigator of the 'New Mexico Women's Health Study'.

Following approval of the doctoral thesis committee, a dissertation proposal will be submitted to the advisory committee for approval and to the Associate Dean for Research.

Kathy Baumgartner School of Public Health Student Mail Box

Dear Dr. Baumgartner,

Congratulations on the successful completion of your qualifying examination for the PhD degree which officially converts you from a doctoral student to a doctoral candidate.

We are pleased to have the opportunity to continue working with you as you proceed toward completion and presentation of an original research project that makes a substantial contribution to knowledge in community health sciences.

Yours sincerely,

Palmer Beasley, M.D.

Dean

# Memorandum

September 16, 1997

To: Palmer Beasley

From: Fred Annegers

J.7. A.

Regarding: Kathy Baumgartner

It is my pleasure to announce that Kathy Baumgartner has successfully completed her qualifying examination for the Ph.D. program in epidemiology. The committee recommends that she proceed to the dissertation phase of her program.

cc. Sue McPherson Ralph Frankowski
